

**CMFF'18**  
Conference on Modelling Fluid Flow  
Danubius Hotel Gellért

September 4-7, 2018  
Danubius Hotel Gellért  
Budapest, Hungary

# Final Programme

---

**Department of Fluid Mechanics / Faculty of Mechanical Engineering**  
**Budapest University of Technology and Economics**

Gellért Mountain

Hotel Gellért

Szent Gellért square

Fővám square

Szabadság Bridge

Danube

Budapest University of Technology and Economics

Müegyetem wharf

Bartók Béla street

Budafoki street

Bertalan Lajos street

Department of Fluid Mechanics AE Building

Petőfi Bridge

Egr József street

Karinthy Frigyes street

Irinyi József street

# Welcome to the 17th event of the international conference series on Fluid Flow Technologies!

## Conference Venue - Buildings of Interest

---

### **Danubius Hotel Gellért**

Szent Gellért tér 1.,  
Budapest, H-1111

Registration on the 5th of September, the Plenary Session, the oral presentations and the workshops will take place in this building.

The venue of the Conference, Danubius Hotel Gellért is located at Szent Gellért tér/square (see the map).

### **Department of Fluid Mechanics**

Bertalan Lajos u. 4-6., H-1111 Budapest  
"AE" building of BME

The Registration and Welcome Reception on the 4th of September will take place in this building. The Department can be reached from Szent Gellért tér/square along Budafoki út/avenue, along the bank of the Danube and through the garden of the University, or from Petőfi híd/bridge along the bank of the Danube (see the map).

The 17th event of the international conference series  
on Fluid Flow Technologies held in Budapest

CMFF'18 September 4-7, 2018

Danubius Hotel Gellért  
Budapest, Hungary

### **Conference Secretariat**

**Department of Fluid Mechanics / Faculty of Mechanical Engineering  
Budapest University of Technology and Economics**

Bertalan L. u. 4-6., H 1111 Budapest, Hungary

Tel: +36 1 463 26 35

cmff@ara.bme.hu www.cmff.hu

### **Registration and Information Desk**

#### **Opening hours:**

**Tuesday** 4th of September, 6 pm -8 pm:

Located on the ground floor of the Department of Fluid Mechanics, AE building.

**Wednesday** 5th of September, 8 am - 6 pm:

Located in the Danubius Hotel Gellért.

Organizers wearing blue badges are pleased to provide information.

### **Lunch and coffee breaks**

Lunch as well as coffee will be served in the Danubius Hotel Gellért.

### **Transportation**

Danubius Hotel Gellért is easily accessible by public transport (tram, bus, M4).

You can find more information about public transport on the internet.

[www.bkk.hu](http://www.bkk.hu)

### **Restrictions**

Videotaping or audio recording of any session and sale of any publication not authorised by the Conference Secretariat is prohibited.

### **Social programmes**

#### **Welcome Reception (4th of September, 6 pm - 8 pm)**

offered by the Conference Organisers and hosted  
by the Department of Fluid Mechanics (AE Building).

#### **Gala Dinner (5th of September, 7:30 pm -10 pm)**

to be held in the Duna Room of Danubius Hotel Gellért.

## Speaker briefing

- Laptops for PowerPoint and pdf presentations, video projectors and pointers are available in each conference room.
- Please contact your session chairperson 10 minutes prior to session opening and provide him/her with your data in a written format, in order to make it possible for him/her to introduce you to the audience:
  - name of the presenting author
  - title
  - position
  - affiliation
  - year of receipt and subject of scientific degree (as appropriate)
- Please also contact the session secretary 10 minutes prior to session opening to load your PowerPoint or pdf presentation onto the on-site laptop. You have to deliver your PowerPoint or pdf files on a pen-drive.
- Timing of presentation: You are requested to prepare an oral presentation of duration of 15 minutes. Please respect this time limit strictly, in order to avoid the disturbance of the time schedule. Your presentation will be followed by a 5-minute discussion.

### The 4 keynote speeches will be in the topics of:

“Turbomachinery-related aeroacoustic modelling and simulation”

by Prof. S. **Moreau**, Sherbrooke (CDN)

“Modeling (understanding and controlling) turbulent flows:  
the heritage of Leonardo da Vinci in modern computational  
fluid dynamics”

by Dr. A. **Corsini**, Rome (I)

“State of the art and challenges related to application of CFD  
in fluids engineering”,

by Prof. M. **Perić**, Erlangen (D)

“Experimental characterization of sprays: special needs  
in validating computational models”

by Prof. Y. **Hardalupas**, London (UK)

## CMFF'18 Programme of Tuesday

**Dept. of Fluid Mechanics  
Budapest University of Technology and Economics**

4 September 2018  
1111 Budapest, Bertalan Lajos utca 4-6

16:00 - 18:00 **Registration and Welcome Reception**

## CMFF'18 Programme of Wednesday

**Danubius Hotel Gellért**

5 September 2018

	Tea Room	Gobelin Room	Kávé Room	Forrás Room
9 :00 - 9:10	-	<b>Welcome Address</b>	-	-

**#141**

→ **Turbomachinery-related aeroacoustic modelling and simulation**

Prof. Stéphane **Moreau**

Université de Sherbrooke, Sherbrooke (Québec), Canada

→ **ABSTRACT**

In future Ultra-High By-Pass Ratio turboengines, the turbomachinery noise (fan and turbine stages mainly) is expected to increase significantly. A review of analytical models and numerical methods to yield both tonal and broadband contributions of such noise sources is presented. The former rely on hybrid methods coupling gust response over infinitely thin flat plates of finite chord length either isolated or in cascade, and acoustic analogies in free field and in a duct. The latter yields tonal noise with unsteady Reynolds-Averaged Navier-Stokes (u-RANS) simulations, and broadband noise with Large Eddy Simulations (LES). The analytical models are shown to provide good and fast first sound estimates at pre-design stages, and to easily separate the different noise sources. The u-RANS simulations are now able to give accurate estimates of tonal noise of the most complex asymmetric, heterogeneous fan-OGV configurations. Wall-modeled LES on rescaled stage configurations have now been achieved on all components: a low-pressure compressor stage, a transonic high-pressure turbine stage and a fan-OGV configuration with good overall sound power level predictions for the latter. In this case, hybrid Lattice Boltzmann /very large-eddy simulations also appear to be an excellent alternative to yield both contributions accurately at once.

---

Wed. 5. Sept. 10:25 - 12:05

10:25 - 10:45

→ Medical introduction to endovascular treatment of intracranial aneurysms

Jeroen **Boogaarts** Dept. Neurosurgery,  
Radboud Univ. Medical Center, Nijmegen, Netherlands

10:45 - 11:05

→ Haemodynamics, thrombosis and computational flow diverter selection protocols for cerebral aneurysms

Yiannis **Ventikos** Dept. Mechanical Engineering,  
University College London, England

**#137**

11:05 - 11:25

→ Toward automated analysis of flow in stented aneurysms

Julia **Mikhal**<sup>1</sup>, Gabriela **Ong**<sup>2</sup>, Guido de **Jong**<sup>3</sup>, Rene **Aquarius**<sup>3</sup>,  
Joost de **Vries**<sup>3</sup>, Jeroen **Boogaarts**<sup>3</sup> and Bernard **Geurts**<sup>2,4</sup>

**1** BIOS Lab-on-a-Chip Group, Fac. EEMCS, Univ. Twente, Enschede, The Netherlands

**2** Multiscale Modeling and Simulation, Fac. EEMCS, Univ. Twente, Enschede, NL

**3** Dept. of Neurosurgery, Radboud Univ. Medical Center, Nijmegen, Netherlands

**4** Multiscale Physics of Energy Systems, Fac. Applied Physics, Eindhoven Univ. Technology, The Netherlands

**#84**

11:25 - 11:45

→ Haemodynamic risk factors of endothelial erosion for patient-specific treatment of coronary heart disease

Michael **McElroy**<sup>1,2</sup>, Stephen **White**<sup>1</sup>, Thomas **Johnson**<sup>3</sup>, Frank **Gijzen**<sup>4</sup> and Amir **Keshmiri**<sup>2</sup>

**1** School of Healthcare Science, Manchester Metropolitan University, U.K.

**2** School of Mechanical, Aerospace and Civil Engineering (MACE),  
The University of Manchester, U.K

**3** Bristol Heart Institute, University Hospitals Bristol NHS Foundation Trust, Bristol, U.K.

**4** Dept. of Biomedical Engineering, Erasmus Medical Center, Rotterdam,  
The Netherlands.

**#131**

11:45 - 12:05

→ How to measure blood damage? – Custom-made test benches for cardiovascular implants and devices

Christina **Esch**, Marc **Mueller**, Benjamin **Krolitzki** and Birgit **Glasmacher**

Institute of Multiphase Processes, Faculty of Mechanical Engineering,  
Leibniz University of Hannover, Germany

**Session Identifier**      **WS2- WORKSHOP**      **Gobelin Room**  
**Title**      **On the use of big data technologies in turbomachinery,  
machine learnt technologies in turbomachinery applications**

**WS Leader**      **Prof. Alessandro Corsini**  
Dept. Mechanical and Aerospace Engineering, Fac. Civil and Industrial Engineering, Sapienza University of Rome, Roma, Italy

**Co-organizer**      **Dr. Giovanni Delibra**  
Dep. Mechanical and Aerospace Engineering, Fac. Civil and Industrial Engineering, Sapienza University of Rome, Roma, Italy

---

Wed. 5. Sept. 10:25 - 11:45

10:25 - 10:45

→ On surrogate-based optimization of low-speed axial fan blade profiles

**Gino Angelini**

Department of Mechanical and Aerospace Engineering, Faculty of Civil and Industrial Engineering, Sapienza University of Rome, Italy

10:45 - 11:05

→ Adaptive wall function based on deep learning of turbulent flows

**Lorenzo Tieghi**

Department of Mechanical and Aerospace Engineering, Faculty of Civil and Industrial Engineering, Sapienza University of Rome, Italy

11:05 - 11:25

→ Axial fan performance correlations using deep data diving

**Giovanni Delibra**

Department of Mechanical and Aerospace Engineering, Faculty of Civil and Industrial Engineering, Sapienza University of Rome, Italy

11:25 - 11:45

→ Anomaly detection in turbomachinery with use of phase space portraits

**Alessandro Corsini**

Department of Mechanical and Aerospace Engineering, Faculty of Civil and Industrial Engineering, Sapienza University of Rome, Italy

**Session Identifier**  
**Session Main Topic**  
**Chairperson**

**Kávé Room**

Wed. 5. Sept. 10:25 - 12:05

**#3** 10:25 - 10:45  
→ Impacts of pitched tips of kneading element in twin-screw extrusion: tuning flow pattern and mixing performance

Yasuya **Nakayama**<sup>2</sup>, Hiroki **Takemitsu**<sup>2</sup>, Toshihisa **Kajiwara**<sup>1</sup>,  
Koichi **Kimura**<sup>3</sup>, Takahide **Takeuchi**<sup>3</sup> and Hideki **Tomiyama**<sup>3</sup>

**1** Department of Chemical Engineering, Kyushu University, Fukuoka, Japan

**2** Department of Chemical Engineering, Kyushu University, Fukuoka, Japan

**3** Hiroshima Plant, The Japan Steel Works Ltd., Hiroshima, Japan

**#27** 10:45 - 11:05  
→ Couette-Poiseuille flow of a general non-Newtonian liquid in a cylinder annuli

Péter **Nagy-György** and Csaba **Hós**

Department of Hydrodynamic Systems, Faculty of Mechanical Engineering,  
Budapest University of Technology and Economics, Hungary

**#91** 11:05 - 11:25  
→ A rotary wave in phase condenser mode

Herbert **Steinrück**<sup>1</sup> Anton **Maly**<sup>2</sup> and Gregor **Glanz**<sup>1</sup>

**1** Department of Fluid Mechanics and Heat Transfer, TU Wien, Vienna, Austria

**2** Institute of Energy Systems and Thermodynamics, TU Wien, Vienna, Austria

**#110** 11:25 - 11:45  
→ Development of air-cooling concepts for electric motor used in electric aircrafts

Márton **Koren**<sup>1</sup>, Zoltán **Petró**<sup>2</sup>, Viktor **Szente**<sup>1</sup>, János **Dorogi**<sup>2</sup>,  
Gergely György **Balázs**<sup>2</sup>

**1** Department of Fluid Mechanics, Faculty of Mechanical Engineering,  
Budapest University of Technology and Economics, Budapest, Hungary

**2** Corporate Technology, Siemens Zrt., Budapest, Hungary

**#117** 11:45 - 12:05  
→ Cooling jacket development for electric motors used in e-aircrafts

Szabolcs **Santa**<sup>1</sup>, Zoltan **Petro**<sup>2</sup>, Viktor **Szente**<sup>1</sup>, Janos **Dorogi**<sup>2</sup>,  
Gergely Gy. **Balazs**<sup>2</sup>

Wed. 5. Sept. 10:25 - 12:05

**#37** 10:25 - 10:45

↪ Heat transfer across the free surface of a thermocapillary liquid bridge

Francesco **Romanò** and Hendrik **Kuhlmann**

Institute of Fluid Mechanics and Heat Transfer, TU Wien, Vienna, Austria

**#77** 10:45 - 11:05

↪ Modelling of breathing phenomena within large storage tanks during rapid cooling into metastable two-phase condition

Natalie **Schmidt**<sup>1</sup>, Jens **Denecke**<sup>1</sup>, Juergen **Schmidt**<sup>1</sup> and Michael **Davies**<sup>2</sup>

**1** CSE Center of Safety Excellence gGmbH, Pfinzthal, Germany

**2** Braunschweiger Flammenfilter GmbH

**#82** 11:05 - 11:25

↪ Modelling of heat transfer through the external wall barrier

Ewa **Szymanek** and Artur **Tyliszczak**

Fac. of Mechanical Engineering and Computer Science,  
Czestochowa Univ. of Technology, Poland

**#104** 11:25 - 11:45

↪ Computations of non-isothermal compressible gas flows around moving solid object

Daisuke **Toriu** and Satoru **Ushijima**

Academic Center for Computing and Media Studies (ACCMS),  
Kyoto University, Japan

**#68** 11:45 - 12:05

↪ Energy cascade in a nonlinear mechanistic model of turbulence

Bendegúz Dezsó **Bak** and Tamás **Kalmár-Nagy**

Department of Fluid Mechanics, Faculty of Mechanical Engineering,  
Budapest University of Technology and Economics, Hungary

**Session Identifier**  
**Chairperson**

**Plenary Session 2**  
**Prof. Dominique Thévenin**

**Gobelin Room**

Laboratory of Fluid Dynamics and Technical Flows,  
Institute of Fluid Dynamics and Thermodynamics,  
University of Magdeburg "Otto von Guericke", Germany

**Invited Speaker**

**Prof. Alessandro Corsini**

Department of Mechanical and Aerospace Engineering,  
Faculty of Civil and Industrial Engineering,  
Sapienza University of Rome, Roma, Italy

Wed. 5. Sept. 13:35 - 14:20

**#140**

→ **Modeling (understanding and controlling) turbulent flows: the heritage of Leonardo da Vinci in modern computational fluid dynamics**

Prof. Alessandro **Corsini**

Department of Mechanical and Aerospace Engineering,  
Faculty of Civil and Industrial Engineering,  
Sapienza University of Rome, Roma, Italy

→ **ABSTRACT**

Why it is possible to claim that Leonardo da Vinci has been the "inventor" of the scientific method decades before the Ones (i.e. Galileo Galilei for instance) the History of Science is traditionally giving the fatherhood?

Why Leonardo da Vinci is (somehow) an ante-litteram fluid-dynamic scientist?

Why Leonardo's approach can be considered an anticipation of modern applied physics (CFD) and why his newness has not yet fully appreciated?

Taking the move from the above three questions, the present work possibly explores the open literature to find proofs of Leonardo's contribution to modern fluid dynamics. The manuscript focuses on three pillar contributions chosen, in the vast repertoire of Leonardo's Notebooks and Artworks, to give a personal perspective on his contribution to the frontiers of the fluid dynamics investigation. Specifically, the manuscript advocates: the link between flow visualization and modern deep learning usage in flow modelling (Section 2), the eco-design perspective implicit in the mimicry of Nature (Section 3), and the intuition of a science of quality and patterns (Section 4)

→ **ABSTRACT**

In this paper the state-of-the-art and challenges related to application of Computational Fluid Dynamics (CFD) in fluids engineering are discussed. The major milestones in the development from a pure research discipline to an integral part of the design and optimization process in industry are described. Advantages of CFD over alternatives, especially in the early product design stage but also in product optimization and problem solving, are also addressed. Finally, the trends for future developments in CFD and its application in engineering are outlined.

Keywords: CFD, Fluid Dynamics, Fluids Engineering, Industrial Application of CFD

→ Experimental characterization of sprays: special needs in validating computational models

Prof. Yannis **Hardalupas**,

Department of Mechanical Engineering, Imperial College London, United Kingdom

→ ABSTRACT

The formation and droplet dispersion of sprays is important for many industrial applications. The formation of sprays occurs through two stages of the liquid breakup process. The primary breakup, during which the continuous liquid, supplied to an atomiser, breaks up into liquid fragments, and the secondary breakup, during which the liquid fragments breakup again to form the final stable droplets that exist in sprays downstream from the nozzle. The stable droplets then, for example, disperse through interaction with the surrounding gas flow turbulence, collide or evaporate, and these processes modify the characteristics of sprays.

The current paper summarises recent experimental approaches that allow the study of primary and secondary breakup close to the atomiser exit, where optical access is limited, and the downstream stable droplet behaviour in sprays. Examples of the physical understanding gained from these experimental studies are presented.

The consequences of these findings on the development and evaluation of improved computational models for liquid atomisation and droplet dispersion is discussed.

Stefan **Hoerner**<sup>1</sup>, Shokoofeh **Abbaszadeh**<sup>2</sup>, Thierry **Maitre**<sup>3</sup>,

Laure **Vignal**<sup>3</sup>, Christian-Toralf **Weber**<sup>4</sup>, Roberto **Leidhold**<sup>2</sup> and Dominique **Thévenin**<sup>1</sup>

**1** Institute of Fluid Dynamics and Thermodynamics, Faculty of Process and Systems Engineering, Otto-von-Guericke-University Magdeburg, Germany

**2** Institute of Electric Power Systems, Faculty of Electrical Engineering and Information Technology, Otto-von-Guericke-University Magdeburg, Germany

**3** Laboratory of Geophysical and Industrial Flows, Grenoble Institute of Technology, University Grenoble-Alpes, Grenoble, France

**4** Department of Engineering and Industrial Design, University of Applied Sciences Magdeburg, Germany

**#106** 11:50 - 12:10

→ Blockage effect of a runner blade on the hydraulic performance and internal flow characteristics of a Francis hydro turbine

Seung-Jun **Kim**<sup>1</sup>, Young-Seok **Choi**<sup>1</sup>, Yong **Cho**<sup>2</sup>, Jong-Woong **Choi**<sup>2</sup> and Jin-Hyuk **Kim**<sup>1</sup>

**1** Advanced Energy & Technology, University of Science & Technology, Daejeon, Korea; Thermal & Fluid System R&D Group, Korea Institute of Industrial Technology, Cheonan, Korea

**2** K-water Institute, Korea Water Resources Corporation, Daejeon, Korea

**#74** 12:10 - 12:30

→ Pressure pulsation in the stationary and rotating system of a high specific speed Kaplan pit-type turbine – CFD-simulations and experimental verification

Helmut **Benigni**, Juergen **Schiffer**, Christian **Bodner** and Helmut **Jaberg**

Institute of Hydraulic Fluid Machinery, Faculty of Mechanical Engineering, Graz University of Technology, Austria

**#83** 12:30 - 12:50

→ Development of a cross-flow-turbine by using 3D-CFD-calculations

Christian **Bodner**, Helmut **Benigni** and Helmut **Jaberg**

Institute for Hydraulic Fluid Machinery, Graz University of Technology, Austria

**Session Identifier**  
**Session Main Topic**  
**Chairperson**

**IF3**  
**Internal Flow**  
**Prof. Jing Ren**

**Kávé Room**

Dep. Thermal Engineering, Institute of Gas Turbine, Tsinghua University, Beijing, China

Fri. 7. Sept. 11:30 - 12:50

**#5** 11:30 - 11:50  
↳ CFD-based optimization of sharp square-sectioned U-bends with/without system rotation: RANS vs. IDDES

Evgueni **Smirnov**<sup>1</sup>, Dmitry **Panov**<sup>2</sup>, Vladimir **Ris**<sup>2</sup> and Valery **Goryachev**<sup>3</sup>

**1** Department of Fluid Dynamics, Combustion and Heat Transfer, Peter the Great St. Petersburg Polytechnic University, St. Petersburg, Russia

**2** Peter the Great St. Petersburg Polytechnic University, St. Petersburg, Russia

**3** Tver State Technical University, Tver, Russia

**#26** 11:50 - 12:10  
↳ Predicting the flow field in a U-bend with deep neural networks

Gergely **Hajgató**<sup>1</sup>, Bálint **Gyires-Tóth**<sup>2</sup> and György **Paál**<sup>1</sup>

**1** Department of Hydrodynamic Systems, Faculty of Mechanical Engineering, Budapest University of Technology and Economics, Budapest, Hungary

**2** Department of Telecommunications and Media Informatics, Faculty of Electrical Engineering and Informatics, Budapest University of Technology and Economics

**#36** 12:10 - 12:30  
↳ Comparison of LES and RANS evaluations with experimental tests on u-bend duct geometry

Giacomo **Alessi**<sup>1,2</sup>, Tom **Verstraete**<sup>1</sup>, Lilla **Koloszar**<sup>1</sup> and Jeroen van **Beeck**<sup>1</sup>

**1** von Karman Institute for Fluid Dynamics, Sint-Genesius-Rode, Belgium

**2** Catholic University of Leuven, Civil Engineering Department, Leuven, Belgium

**#54** 12:30 - 12:50  
↳ Tomographic PIV measurements in a helically coiled reactor

Péter **Kováts**, Katharina **Zähringer**,

Dominique **Thévenin** and Fabio J. W. A. **Martins**

Laboratory of Fluid Dynamics and Technical Flows, Otto-von-Guericke-Universität Magdeburg, Magdeburg, Germany

**Session Identifier**  
**Session Main Topic**  
**Chairperson**

**RF**  
**Reactive Flow**  
**Dr. Balázs Pritz**

**Forrás Room**

Institute of Fluid Machinery, Karlsruhe Institute of Technology, Karlsruhe, Germany

Fri. 7. Sept. 11:30 - 12:30

**#30** 11:30 - 11:50  
→ One-dimensional turbulence simulations for reactive flows in open and closed systems

Tommy **Starick**, Juan **A. Medina M.** and Heiko **Schmidt**

Faculty of Mechanical Engineering, Brandenburg University of Technology Cottbus-Senftenberg, Germany

**#97** 11:50 - 12:10  
→ Flamelet progress variable modelling of pulverised coal devolatilisation and burning in opposed jets

Yiran **Chen**<sup>1,2</sup>, Oliver **Stein**<sup>2</sup>, Andreas **Kronenburg**<sup>2</sup>,

Michele **Vascellari**<sup>3</sup>, Christian **Hasse**<sup>4</sup> and Kaihong **Luo**<sup>1,5</sup>

**1** Center for Combustion Energy, Key Laboratory for Thermal Science and Power Engineering of Ministry of Education, Department of Thermal Engineering, Tsinghua University, Beijing, PR China

**2** Institut für Technische Verbrennung, Universität Stuttgart, Stuttgart, Germany

**3** Numerical Thermo-Fluid Dynamics, TU Bergakademie Freiberg, Freiberg, Germany

**4** Simulation of Reactive Thermo-Fluid Systems, TU Darmstadt, Darmstadt, Germany

**5** Department of Mechanical Engineering, University College London, London, UK

**#79** 12:10 - 12:30  
→ Modelling of the spark ignition in turbulent reacting droplet-laden jet using LES

Jakub **Stempka**, Lukasz **Kuban** and Artur **Tyliuszcak**

Institute of Thermal Machinery, Czestochowa University of Technology,

Faculty of Mechanical Engineering and Computer Science, Czestochowa, Poland

The Organizing Committee of CMFF'18 would like to thank the contribution of the Review Organizers:

Dr. S. Campobasso

Dr. A. Ćoćić

Dr. G. Delibra

Prof. S. Drobniak

Dr. Á. Fáy

Prof. V. Goryachev

Dr. F. Hegedűs

Dr. Cs. Horváth

Dr. Cs. Hős

Prof. H. Jaberg

Dr. G. Janiga

Dr. A. Keshmiri

Prof. P. Louda

Prof. S. Liu

Prof. M. Luca

Prof. Kai Luo

Prof. N.C. Markatos

Prof. M. Nedeljkovic

Dr. B. Pritz

Prof. J. Revstedt

Dr. F. Romanò

Dr. A. Samad

Prof. S. Sasic

Prof. H. Schmidt

Prof. B. Shiau

Prof. H. Steinrück

Prof. T. Takahashi

Prof. P.-U. Thamsen

Dr. A. Tyliczszak

Dr. B.P.M. van Esch

Dr. T. Weidinger

Prof. R. Willinger
